Subject Index of Volume 50

Abrasion
a new test method for the intrinsic abrasion resistance of thin coatings, 75
Adhesion
failure modes in scratch adhesion testing, 25
Aluminium
electron beam and laser surface alloying of Al–Si base alloys, 295
formation and characterization of anodized layers on CP Ti and Ti–6Al–4V biomaterials, 223
preparation and structures of plasma-sprayed γ- and α-Al_2O_3 coatings, 213
requisite parameters for optimal wear performances of nitrogen implanted Ti and Ti–6Al–4V, 135
surface modification of Ti–6Al–4V surgical alloy by plasma source ion implantation, 1
the effect of pack-aluminisation on the microstructure of MCrAlY and the performance of thermal barrier coatings, 277
Amorphous alloys
some applications of amorphous alloy coatings by sputtering, 127
Arc bond sputtering
a new method for PVD hard coating: ABS™ (arc bond sputtering), 169
Arc evaporation
plasma and deposition enhancement by modified arc evaporation source, 103
Arc spraying
synthesis and deposition of TiB_2-containing materials by arc spraying, 241

Boron
formation and characterization of cubic boron nitride films by an arc-like plasma-enhanced ion plating method, 33
synthesis and deposition of TiB_2-containing materials by arc spraying, 241

Carbides
research, development and performance of cemented carbide tools coated by plasma-activated chemical vapour deposition, 57
Carbon
a tribological investigation of the graphite-to-diamond like behaviour of amorphous carbon films ion beam deposited on ceramic substrates, 17
particle behaviour during high velocity oxy-fuel spraying, 67
properties and applications of ion-plated coatings in the system Cr–C–N, 53
SiC_xN_y:H films produced from an r.f. discharge of the SiH_4–CH_4–NH_3 system, 11
the influence of composition and process parameters on the microstructure of TiC–Fe multiphase and multilayer coatings, 233
thermoeffusion of hydrogen in a-C:H films prepared by glow discharge, 209
Ceramics
fabrication of ceramic coatings by improved plasma chemical vapour deposition, 85
Chemical vapour deposition
research, development and performance of cemented carbide tools coated by plasma-activated chemical vapour deposition, 57
Chromium
characterization of PVD (Ti,Cr)N_x hard coatings, 45
properties and applications of ion-plated coatings in the system Cr–C–N, 53
the effect of pack-aluminisation on the microstructure of MCrAlY and the performance of thermal barrier coatings, 277
Cobalt
advanced poly (acrylic) acid-modified zinc phosphate conversion coatings: use of cobalt and nickel cations, 89
particle behaviour during high velocity oxy-fuel spraying, 67
Conductivity
production of dielectric and semiconducting diamond-like films, 205
Conversion coatings
advanced poly (acrylic) acid-modified zinc phosphate conversion coatings: use of cobalt and nickel cations, 89
Corrosion
comparison of the corrosion resistance of TiN and (Ti,Al)N coatings, 161
integrated sintering-coating of iron powder articles in metal-oxide mixture, 271
particle behaviour during high velocity oxy-fuel spraying, 67
the coatings and high temperature corrosion data bank, 263

Deposition enhancement
plasma and deposition enhancement by modified arc evaporation source, 103
Diamond
a tribological investigation of the graphite-to-diamond like behaviour of amorphous carbon films ion beam deposited on ceramic substrates, 17
properties of diamond-like carbon, 185
production of dielectric and semiconducting diamond-like films, 205
Diffusion alloying
integrated sintering-coating of iron powder articles in metal-oxide mixture, 271

Electrodeposits
effect of substrate pretreatment on the porosity in thin nickel electrodeposits, 289
Electron beam method
electron beam and laser surface alloying of Al–Si base alloys, 295

Friction
the friction and wear of thin titanium nitride and silicon nitride coatings on stainless steel at temperatures to 500 °C, 151

Graphite
a tribological investigation of the graphite-to-diamond like behaviour of amorphous carbon films ion beam deposited on ceramic substrates, 17

Hard coatings
a new method for PVD hard coating: ABS™ (arc bond sputtering), 169
characterization of PVD (Ti,Cr)N_x hard coatings, 45
comparison of the corrosion resistance of TiN and (Ti,Al)N coatings, 161
failure modes in scratch adhesion testing, 25

Hydrogen
SiC_xN_y:H films produced from an r.f. discharge of the SiH_4–CH_4–NH_3 system, 11
thermoeffusion of hydrogen in a-C:H films prepared by glow discharge, 209

Ion beams
a tribological investigation of the graphite-to-diamond like behaviour of amorphous carbon films ion beam deposited on ceramic substrates, 17
Ion implantation
requisite parameters for optimal wear performances of nitrogen implanted Ti and Ti–6Al–4V, 135
Iron
integrated sintering-coating of iron powder articles in metal-oxide mixture, 271
the influence of composition and process parameters on the microstructure of TiC–Fe multiphase and multilayer coatings, 233

Laser method
electron beam and laser surface alloying of Al–Si base alloys, 295

Magnetron methods
comparison of operating conditions and TiN films produced from both directly and indirectly cooled d.c. magnetron targets, 249
dual-unbalanced magnetron deposition of TiN films, 255
X-ray diffraction determination of texture and internal stresses in magnetron PVD molybdenum thin films, 5
Microstructure
microstructural and indentation characterization of Ti/TiN multilayer films, 97
microstructure, composition, property relationships in plasma-sprayed thermal barrier coatings, 141
the effect of pack-aluminisation on the microstructure of MCrAlY and the performance of thermal barrier coatings, 277
the influence of composition and process parameters on the microstructure of TiC–Fe multiphase and multilayer coatings, 233
Molybdenum
X-ray diffraction determination of texture and internal stresses in magnetron PVD molybdenum thin films, 5
Multilayer coatings
the influence of composition and process parameters on the microstructure of TiC–Fe multiphase and multilayer coatings, 233
Multilayer films
microstructural and indentation characterization of Ti/TiN multilayer films, 97

Nickel
advanced poly (acrylic) acid-modified zinc phosphate conversion coatings: use of cobalt and nickel cations, 89
comparison of the corrosion resistance of TiN and (Ti,Al)N coatings, 161
effect of substrate pretreatment on the porosity in thin nickel electrodeposits, 289
microstructural and indentation characterization of Ti/TiN multilayer films, 97
Nitrides
formation and characterization of cubic boron nitride films by an arc-like plasma-enhanced ion plating method, 33
lubricated sliding wear of PVD titanium nitride, 117
Nitrogen
characterization of PVD $(Ti,Cr)N_x$ hard coatings, 45
comparison of operating conditions and TiN films produced from both directly and indirectly cooled d.c. magnetron targets, 249
dual-unbalanced magnetron deposition of TiN films, 255
properties and applications of ion-plated coatings in the system Cr–C–N, 53
requisite parameters for optimal wear performances of nitrogen implanted Ti and Ti–6Al–4V, 135
SiC_xN_y:H films produced from an r.f. discharge of the SiH_4–CH_4–NH_3 system, 11
the influence of target temperature on the structure and properties of nitrogen-ion-implanted stainless steel, 41

Oxygen
preparation and structures of plasma-sprayed γ- and α-Al_2O_3 coatings, 213

Particle behaviour
particle behaviour during high velocity oxy-fuel spraying, 67
Phosphate
advanced poly (acrylic) acid-modified zinc phosphate conversion coatings: use of cobalt and nickel cations, 89
Physical vapour deposition
characterization of PVD $(Ti,Cr)N_x$ hard coatings, 45
lubricated sliding wear of PVD titanium nitride, 117
properties and applications of ion-plated coatings in the system Cr–C–N, 53
X-ray diffraction determination of texture and internal stresses in magnetron PVD molybdenum thin films, 5
Plasma methods
fabrication of ceramic coatings by improved plasma chemical vapour deposition, 85
formation and characterization of cubic boron nitride films by an arc-like plasma-enhanced ion plating method, 33
plasma and deposition enhancement by modified arc evaporation source, 103
research, development and performance of cemented carbide tools coated by plasma-activated chemical vapour deposition, 57
surface modification of Ti–6Al–4V surgical alloy by plasma source ion implantation, 1
Plasma spraying
microstructure, composition, property relationships in plasma-sprayed thermal barrier coatings, 141
preparation and structures of plasma-sprayed γ- and α-Al_2O_3 coatings, 213
Porosity
effect of substrate pretreatment on the porosity in thin nickel electrodeposits, 289

r.f. discharge
SiC_xN_y:H films produced from an r.f. discharge of the SiH_4–CH_4–NH_3 system, 11
Raman spectroscopy
production of dielectric and semiconducting diamond-like films, 205

Silicon
electron beam and laser surface alloying of Al–Si base alloys, 295
SiC_xN_y:H films produced from an r.f. discharge of the SiH_4–CH_4–NH_3 system, 11
the friction and wear of thin titanium nitride and silicon nitride coatings on stainless steel at temperatures to 500 °C, 151
Sintering-coating
integrated sintering-coating of iron powder articles in metal-oxide mixture, 271
Sputtering
plasma properties in a planar d.c. magnetron sputtering device, 111
some applications of amorphous alloy coatings by sputtering, 127

Steel
the friction and wear of thin titanium nitride and silicon nitride coatings on stainless steel at temperatures to 500 °C, 151
the influence of target temperature on the structure and properties of nitrogen-ion-implanted stainless steel, 41
Stress
X-ray diffraction determination of texture and internal stresses in magnetron PVD molybdenum thin films, 5
Structure
preparation and structures of plasma-sprayed γ- and α-Al_2O_3 coatings, 213
Synthesis
synthesis and deposition of TiB_2-containing materials by arc spraying, 241

Thermal barrier coatings
microstructure, composition, property relationships in plasma-sprayed thermal barrier coatings, 141
the effect of pack-aluminisation on the microstructure of MCrAlY and the performance of thermal barrier coatings, 277
Thermoeffusion
Thermoeffusion of hydrogen in a-C:H films prepared by glow discharge, 209
Thin coatings
a new test method for the intrinsic abrasion resistance of thin coatings, 75
Titanium
characterization of PVD (Ti,Cr)N_x hard coatings, 45
comparison of the corrosion resistance of TiN and (Ti,Al)N coatings, 161
comparison of operating conditions and TiN films produced from both directly and indirectly cooled d.c. magnetron targets, 249
dual-unbalanced magnetron deposition of TiN films, 255
formation and characterization of anodized layers on CP Ti and Ti–6Al–4V biomaterials, 223
lubricated sliding wear of PVD titanium nitride, 117
microstructural and indentation characterization of Ti/TiN multilayer films, 97
requisite parameters for optimal wear performances of nitrogen implanted Ti and Ti–6Al–4V, 135
surface modification of Ti–6Al–4V surgical alloy by plasma source ion implantation, 1
synthesis and deposition of TiB_2-containing materials by arc spraying, 241
the friction and wear of thin titanium nitride and silicon nitride coatings on stainless steel at temperatures to 500 °C, 151
the influence of composition and process parameters on the microstructure of TiC–Fe multiphase and multilayer coatings, 233
Tribology
a tribological investigation of the graphite-to-diamond like behaviour of amorphous carbon films ion beam deposited on ceramic substrates, 17
Tungston
particle behaviour during high velocity oxy-fuel spraying, 67

Vanadium
formation and characterization of anodized layers on CP Ti and Ti–6Al–4V biomaterials, 223
surface modification of Ti–6Al–4V surgical alloy by plasma source ion implantation, 1

Wear
a new test method for the intrinsic abrasion resistance of thin coatings, 75
lubricated sliding wear of PVD titanium nitride, 117
requisite parameters for optimal wear performances of nitrogen implanted Ti and Ti–6Al–4V, 135
the friction and wear of thin titanium nitride and silicon nitride coatings on stainless steel at temperatures to 500 °C, 151

Yttrium
the effect of pack-aluminisation on the microstructure of MCrAlY and the performance of thermal barrier coatings, 277

Zinc
advanced poly (acrylic) acid-modified zinc phosphate conversion coatings: use of cobalt and nickel cations, 89
